

**AMENDMENTS TO THE SPECIFICATION:**

Kindly replace paragraph [0052] with the following amended paragraph:

As shown in Fig. 3, an image forming apparatus 100 is connected with a Network N so that a job for outputting an image from a personal computers 501 (i.e. external device), another image forming apparatus 502 and the like (hereinafter referred to as "distribution document") can be distributed to the image forming apparatus 100. Thus, the image forming apparatus 100 functions as a printer too.

Kindly replace paragraph [0086] with the following amended paragraph:

In S53, it is judged whether or not there is any distribution document (image data) from the personal computer 501 (i.e. external device) or the like. When there is a distribution document (YES in S53), in S54, the notice destination ID of the portable terminal 210 corresponding to the personal computer 501 or the like which is the distribution origin of the distribution document is read from the NVRAM 1243. Furthermore, in S55, the notice origin ID and the notice destination ID which are the information that there is an output-waiting distribution document are transmitted to the corresponding portable terminal 210 via the wireless transmitting portion 201. On the other hand, when there is no distribution document in S53 (NO in S54), the routine proceeds of S56.
